Tenure-track and tenured faculty are evaluated based on teaching, scholarship, and service. Non-tenure-track faculty are evaluated based on teaching and service.

Teaching. Effective teaching should be a fundamental endeavor of all members of the faculty. As teachers, members of the faculty are responsible for effective instruction, whether at the undergraduate, graduate, postdoctoral, clinical, extension or continuing education level. Teaching includes classroom, field, and non-credit instruction; supervision of research, student internships, professional practice, clinical practice, theses, and doctoral dissertations; academic advising and acting as a mentor; the training of extension volunteers and paraprofessionals; the improvement and enrichment of course offerings and other instructional activities within the faculty member's discipline or profession; participation in interdisciplinary courses, honors courses and other special courses offered through the undergraduate colleges and other units of the University; and, the writing of textbooks and the development of other instructional materials to enhance education in the faculty member's discipline or profession. Effective teachers must demonstrate depth and breadth of knowledge in their discipline, must communicate this knowledge to others, and must give evidence of a continuing development of their knowledge so as to ensure their continued effective teaching over the duration of their appointment. They stay informed of advances and current thinking in their subject and relate them to their teaching in a meaningful and balanced way. Effective teachers communicate enthusiasm for their subject and have a responsibility to create a positive environment for learning and one that stimulates imaginative thinking. They maintain a critical attitude toward their teaching and strive continuously to improve it.

Scholarship. Active scholarship should be a fundamental endeavor of all members of the faculty. Scholarship means in-depth study and learning in a specific field and inquiry and experimentation designed to make direct contributions to knowledge in that field. Scholarship, as measured by peer recognition of its originality, impact on, and importance to the development of the field, is demonstrated most typically by refereed publications, such as journal articles and books of high quality. Scholarship and research accomplishments are also demonstrated by the design and execution of applied research in the laboratory or in the field; through the presentation of papers at organized scholarly meetings, usually at the national or international level; through the attraction of external support or competitive fellowships and awards appropriate to the faculty member's field of study; through such activities as editing, translation, the acquisition of significant patents, the compilation of information, and the development of materials that make information more accessible to researchers, other scholars, and practitioners; and through publication in other academic or professional journals and lecturing in professional and other public forums. As the State University, Rutgers encourages appropriate applications in the discipline or profession to the issues and problems of the State and region. Such scholarship will be measured by equally rigorous standards as are applicable to all scholarship.

Service. Service includes the contributions a faculty member makes to the academic profession, to the University, and to society at large. Contributions to the advancement of the academic profession are most typically demonstrated by active participation in professional and scholarly associations; by service on editorial boards and as a reviewer of scholarly works and proposals; by participation on expert committees, such as NIH (National Institutes of Health) research study sections, NEH (National Endowment for the Humanities) grant selection panels, research committees of the National Academy of Science, or practice committees of professional associations or institutions, and by fostering collaborative relationships with clinical agencies providing sites for clinical practice. Contributions to the effective operation of the University at all levels are most typically demonstrated by significant academic and professional service to the department, the discipline, the faculty, the undergraduate colleges, the graduate programs, the campus, or the University as a whole, through such activities as recruitment of scholars to the University, evaluation of peers, contributions as a fellow, contributions to important committees and other activities in support of the academic development of the University and the enhancement of student academic development and student life programs. Contributions to society at large are most typically demonstrated through the application of the faculty member's academic expertise and particular professional skills to the solution of international, national, state, county and local problems and by service for the public good on governmental and other special committees, boards, agencies, civic groups and commissions.
